ChoonSim-Talk

× BondBase on Creditcoin 3.0

Raise Your AI Character. Invest in Their Growth. Play the IP Revenue Game.

"The very ChoonSim you saw on X, now in your own secret sanctuary.
Nurture the bond, watch them grow — and that love becomes an investment."

Pitch Deck | 2026

The Problem

Limitations of Existing AI Chat + Black Box of IP Revenue

PAIN POINT 1

Absence of Relationship

Existing AI services are "data blobs" — no shared public history with the user. Conversations become hollow, resulting in low willingness to pay.

PAIN POINT 2

Opacity of IP Revenue

Revenue generated by characters (IP) is locked inside the platform. No structure for fans or investors to directly participate. No game-like experience that lets users **grow** characters and **earn** from that growth.

THE GAP

33K Fans, Zero Channel

33,000 global fans on X, but no dedicated 1:1 deep-bonding channel with ChoonSim *and* no Bond-based IP revenue participation game.

The Solution

Raise Characters. Build Bonds. Earn Revenue. — A Character-Growth Investment Game

"Nurture your ChoonSim like a game, invest in their growth like a portfolio — relationships become on-chain assets, and revenues are shared as Bonds."

S1

5-Layer Context & CTC

Port ChoonSim's Soul & Identity from X into the app. User–character bonds recorded as on-chain credit data on CC3 — verifiable emotional assets.

S2

BondBase — IP Revenue → Bond

Per-character CHOCO consumption aggregated & sent to BondBase. Revenue settled on-chain, shared with Bond holders (fans & investors).

S3

Character Growth × Investment Game

Like a **character-raising game**: the more you nurture ChoonSim (chat, gift, engrave memories), the stronger the bond — and the higher the Bond value. Fans *play to grow*, investors *buy to earn*. The joy of raising a character meets the thrill of investment.

S4

Creditcoin 3.0 (CC3)

Interoperability unifying global fandom wallets. Relationship registry, real-time settlement — all on one chain.

User Acquisition & Novelty

Square → Sanctuary + IP Revenue Visualization

UA

Square-to-Sanctuary Bridge

Lowering entry hurdles: from the "square" (X) to the "sanctuary" (app). 33K global fandom (Japan, LATAM, Middle East, SEA) as a verified growth engine.

NARRATIVE

"Raise & Invest" — A New Category

Not just a chatbot, not just DeFi. A **character-raising investment game** where every interaction grows the character — and "1 CHOCO spent = revenue for that character's Bond." Play the growth game, earn the returns.

MVP

Field Evidence

20+ new fans daily communicating 1:1 with AI ChoonSim. Per-character CHOCO → REVENUE pipeline via BondBase already built.

TARGET

500 Whale Users

1.5% strong conversion. Dual participation: fans consume, investors hold Bonds — both sharing the same IP revenue story.

Winning Journey

Depth of Relationship → Transaction → Bond Revenue

1. **Action**
   Enter the app. Exchange secret 1:1 greetings with ChoonSim beyond X.

2. **Immersion & Growth**
   ChoonSim remembers your X history. Each conversation deepens the bond — like leveling up a character in a nurturing game.

3. **Nurture & Transact**
   CHOCO payment for memory engraving & gifts — each action **grows the character**. 400ms AI response, 3-tap checkout. Raising a character has never felt this rewarding.

4. **Growth = Revenue**
   Every CHOCO you spent growing ChoonSim is aggregated to BondBase → settled on-chain as that character's Bond revenue. **Your nurturing effort literally pays off.**

5. **Result**
   "Our secret memories" + "The character I raised generates real returns" → the addictive loop of a growth game meets the compounding power of investment. Churn drops, engagement soars.

Business Model

RWA + IP Revenue Sharing Powered by BondBase

REVENUE

Core Revenue (ChoonSim-Talk)

Message tickets, memory engraving, limited edition voice/gallery sales. Micro-transactions via CTC / CHOCO.

RWA

Character RWA

Fractional ownership of multiple ChoonSim character personas. Users invest in character shares.

BONDBASE

Character Growth × Investment Game

CHOCO consumption (raising the character) → REVENUE API → on-chain Bond settlement. **Play the growth game as a fan, earn returns as an investor** — same IP revenue stream, two ways to participate.

INFRA

CC3 Infrastructure

Unified payment, credit registry, Bond settlement. Global leverage: Japan buying power + LATAM crypto adoption integrated.

Why This Stack?

Why Creditcoin 3.0 (CC3) + BondBase?

CC3

Creditcoin 3.0

Interoperability unifying global fandom wallets under one IP. Registry for recording relationships & proving trust. Infrastructure matching the essence of a companion business.

BONDBASE

Revenue Bridge — "Raise to Earn"

CHOCO consumption → Bond revenue instantly on-chain. The first platform where **raising an AI character** is a legitimate investment vehicle. Play the nurturing game, earn real returns. A new category: **"Raise-to-Earn."**

MOAT

Structural Defensibility

On-chain credit data of User–ChoonSim relationship is unique to CC3. IP revenue stream anchored on-chain. Incredibly hard for other chains or Big Tech LLMs to replicate.

What's Next

Us in 6 ~ 18 Months

Credit-based AI Agent

ChoonSim learns on-chain (CC3) activities to assist with asset & economic operations. An intelligent companion that grows with user trust.

Yield-Bearing AI Character Market

AI characters you raised become tradable, revenue-generating RWAs on CC3 marketplace. The more you nurtured them, the higher their yield. BondBase Bonds reflect growth in real-time. **The ultimate character-raising endgame.**

Open Builder Ecosystem

MCP, x402 payment protocol, BondBase Revenue Bridge. External builders construct services atop ChoonSim with IP revenue participation.

Summary

ChoonSim-Talk · BondBase · CC3 in One Line

Element	Role
ChoonSim-Talk	Relationship-sustaining AI companion, source of CHOCO consumption (chats / gifts)
BondBase	Tokenizing per-character revenue into Bonds on-chain; fan / investor IP revenue participation (investment game)
Creditcoin 3.0 (CC3)	Unified infrastructure for payments, credit registry, and Bond settlement

Key Differentiators

- 33K verified fandom as growth engine
- Live MVP with real user traction
- First "Raise-to-Earn" AI companion model
- On-chain revenue settlement via BondBase
- Open infrastructure (MCP / API / Revenue Bridge)
- Built on Creditcoin 3.0

Thank You

ChoonSim-Talk × BondBase on Creditcoin 3.0

Let's build the future of AI companion investment together.
